stamping the posterior on the background media to create stamping prints.
The kit of the present invention includes a flat, flexible backing piece, [a protective cover folded into a compact size attached to the backing piece, a plurality of] at least one paint bottle[s] attached to the backing piece, [a plurality of] at least one reservoir[s] attached to the backing piece, [a plurality of] at least one painting tool[s] attached to the backing piece, and a plastic cover having a periphery, the plastic cover positioned over the protective cover, plurality of paint bottles, plurality of reservoirs, and plurality of paint brushes, and attached around its peripheral edge to the backing piece.

In the Claims:

Please cancel claims 1-17.

Please add the following new claims:

18. (New) A method of painting using the posterior of an infant, said method comprising the acts of:
providing a background media;
providing a paint supply;
dipping the posterior of the infant in said paint; ^{supply} and
stamping the posterior on said background media to create stamping prints.

19. (New) A method as defined in claim 18, wherein:
said dipping and said stamping steps are repeated in sequence.

20. (New) A method as defined in claim 18, further comprising the act of:

spraying a fixative agent on said background material to set said stamping prints.

21. (New) A method as defined in claim 19, further comprising the act of:

spraying a fixative agent on said background material to set said stamping prints.

5-22. (New) A method as defined in claim 18 further comprising the act of rolling the posterior of the infant during the stamping step.

6-23. (New) A method as defined in claim 18 further comprising the act of rolling the posterior of the infant during each stamping step.

24. (New) A method as defined in claim 18 further comprising the act of overlapping subsequent stampings.

25. (New) A method as defined in claim 18 further comprising the act of ordering stampings in a regular pattern.

26. (New) A method as defined in claim 18 further comprising the act of ordering stampings in a random pattern.

27. (New) A package kit containing articles for painting using the posterior of an infant, said package kit containing:

a backing piece;
a protective cover attached to said backing piece;
at least one paint bottle attached to said backing piece;
at least one reservoir attached to said backing piece;
at least one painting tool attached to said backing piece;
a plastic cover having a periphery, said plastic cover positioned over said protective cover, said at least one paint bottle, said at least one reservoir, and said at least one paint tool, and attached around its peripheral edge to said backing piece.

28. A kit as defined in claim 27, further comprising:
background media attached to said backing piece and under said cover.

29. A kit as defined in claim 27, wherein said painting tool is a paint brush.

30. A kit as defined in claim 27, wherein said painting tool is a poly-brush.

31. (New) A package kit containing articles for painting using the posterior of an infant, said package kit containing:

a backing piece;
at least one paint bottle attached to said backing piece;
